Porting Server Side Source Control Menu items to VS Code: is it possible?

Hi,

I've started active use ISC VS Code extensions about a half year ago, seem to be used to use, and started to enjoy them :)

The [documentation](#) promises the

- integration with server-side source control etc

We were happy enough not to use, while used Studio Source Control menu to run some internal code checkup procedures. Is there any functional equivalent for this in VS Code: can I add custom menu items that should be backed with ObjectScript code to be started on server?
