
Question

[Flávio Lúcio Na...](#) · Jun 22, 2021

How verify if a attribute exists in a object?

I create a object.

```
SET nlsoref=##class(%SYS.NLS.Locale).%New()
```

So I want to verify if the attribute 'test' exists in the object, I tryied use \$data

```
write $data(nlsoref.test)
```

But show this message:

```
<PROPERTY DOES NOT EXIST> *test,%SYS.NLS.Locale
```

Someone can help?

Best regards, Flávio.
