IDE platform for beginners

Hello community...

As there is a certain restriction of commands in Caché, and assuming that the base of most colleges ends up being MySQL, Oracle, SQL Server and others... And the last two with very simple IDEs to use and with the possibility to handle the operation in the database very well, which IDE (if there is an "official" or something like that) would be the best for me to start working more effectively with Caché?

[#Caché](#)

Product version: Caché 2018.1
