Delimiter definition - CacheSQLStorage

Hi all,

We're encountering a problem using CacheSQLStorage where one of the subscripts of this mapped table contains the string "|", which causes issues as Caché uses "|" as a delimiter. Is it possible to assign a different delimiter?

I'm attaching the code of the class as an example.

```
Class MainCore.System.MDA.msort2x2x2 Extends %Persistent [ ProcedureBlock, StorageStrategy = MainStorage ]
{
```

```
Property Subscript1 As %String;
```

```
Property Subscript2 As %String;
```

```
Property Data As %String(MAXLEN = 32000);
```

```
Property ZREF As %String [ Calculated, SqlComputeCode = { S { * } =
##class(MainCore.System.Utils.CacheUtils).getZREF("^["LEASING"]MSORT2",{ID})), SqlComputed, Transient ];
```

```
Index PMKey On (Subscript1, Subscript2) [ IdKey, PrimaryKey, Unique ];
```

```
Storage MainStorage
{
<SQLMap name="MainMap">
<Data name="Data">
<Delimiter>"|"/Delimiter>
<Piece>1</Piece>
</Data>
<Global>^["LEASING"]MSORT2</Global>
<Subscript name="1">
<Expression>{Subscript1}</Expression>
</Subscript>
<Subscript name="2">
<Expression>{Subscript2}</Expression>
</Subscript>
<Type>data</Type>
</SQLMap>
<StreamLocation>^["LEASING"]MSORT2.S</StreamLocation>
<Type>%CacheSQLStorage</Type>
}

}
```
