Applying Stylesheet

Hi Guys,

I'm using the below style and everything looks good, with my Dynamic Grid width 1300px, but when I refresh my grid the width goes out of whack and the grid is too wide, so how can I re-call my enforce my style to be applied again after refreshing my grid, so basically I'm looking for a line of code that I add it to my refreshing () clientMethod ?

XData Style

```
{  
<style type="text/css">  
body {  
  padding: 5px;  
  margin: 0px;  
  height: 100%;  
  background-image : url(images/bkground.gif);  
}
```

```
.zenLabel {  
  font-family: Trebuchet MS;  
  font-size: 0.8em;  
  color: #000000;  
  font-weight: normal;  
}  
.imageclickbuttonstyle {  
  border-width: 0px;  
  font-size:1.16em;  
  cell-align:center;  
  align:center;  
  white-space: normal;  
  font-family: Trebuchet MS, Arial, Helvetica;  
  cursor: pointer;  
}  
#main {  
  border-style: solid;  
  border-top-width: 0px;  
  border-left-width: 2px;  
  border-right-width: 2px;  
  border-bottom-width: 2px;  
  background-color: #ffffff;  
  border-color: #DCE2E8;  
  width: 1300px;  
  height: 595px;
```

Thanks
