Method return List of type

Good afternoon I am making a method of a class that I want to return a list of objects of another class that I have defined, example:

```
ClassMethod myMethod() As list of MyPackage.MyClass
{
}
```

But it gives me a syntax error, I try this and it works:

```
ClassMethod myMethod() As %ListOfObjects
{
}
```

But I would like to keep the typing.

Is there a way?
