## Initialise object list

How do you initialise a list of objects of a particular type?

I have tried the following code and I get an undefined when I try to insert.

```
ClassMethod myMethod()  
{  
    #Dim a As list of Acciones  
    #Dim x As Acciones  
  
    Set x=##class(Acciones).%New()  
  
    Do a.Insert(x)  
  
    U O W a, !  
}
```

I can do this and it works but I don't know if it is correct.

```
ClassMethod myMethod()  
{  
    #Dim a As list of Acciones  
    #Dim x As Acciones  
  
    Set a=##class(%Library.ListOfObjects).%New()  
    Set x=##class(Acciones).%New()  
  
    Do a.Insert(x)  
  
    U O W a, !  
}
```

Is there any way to do something like this?

Set a= New list of Accciones()

Thank you.
