Some elements have no SQL table, how to access them?

Hi Experts,

SQL access,

In the component window, I see that some of the fields have no reference to SQL, for example: The active flag.

how to know all the active elements, when `getdate() >= DateTo` or between time between `From` and `To` does not work in SQL, I see some existing code, with reference to `CAST`, please can you provide more details? Thanks a lot.
