Code Golf: Just add water...

Have you ever seen those vacuum compressed towels, that look like a pill and after you add water became a towel?

That's our challenge for today. As usual shortest solution wins.

Task

You will receive an integer number and you will return a new number where each digit is repeated a number of times equals to its value.

Input:

42

Output:

444422

Note:

- Input is only made of digits [0-9]
- Zero returns an empty string
- Use [this code](#) to check the result length
- You also can [use this test case here](#)
