Method Call

Hi all,

We have a session values in a cache method and need to get those values in a client method (JavaScript).

Eg :

```
ClassMethod Method1()  
{  
  Set %session.Data("Param1")="Data 1"  
}
```

ClientMethod onloadHandler [Language = javascript]

```
{  
  var ret = zenPage.getSessionValues();  
}
```

ClassMethod getSessionValues() As %String [zenMethod]

```
{  
  Set Data = $G(%session.Data("Param1"))  
  Quit Data  
}
```

This is the code we implemented. But the problem is getSessionValues() method isn't called.
We need to know how to call a class method from client method.

Thanks,
Syed M
