InterSystems Senior Developer (IRIS-CACHE)

An international Company ,whose Headquarter is based in Switzerland, is looking for a Senior InterSystems Developer who will join the new IT center based in Turin.

The Senior developers will design, develop and help the operation of Event Processing Solution based on the IRIS Data Platform. He will work with the global teams (India, USA and Europe) and with external partners/vendors. He/She works in coordination with the in-place Community of Practices to ensure the coherence of the development with the program architecture. The Senior Developer will need to deliver several work packages with local/offshore resources. He/She will play a key role during the release process in coordination with both the development team and the Application operational team.

QUALIFICATION AND EXPERIENCE

Required:

-At least 5 years' experience with InterSystems Technology (IRIS/CACHE) with experience in the following subjects:

- COS (cache object script) & OO (object oriented) development using classes

-SQL (both embedded and dynamic), class queries & SP (stored procedures)

-Proven experience with Interoperability (aka Ensamble) in both design and implement solution in a complex production, experience with use of varius adaptators (e.g. SQL, REST, HTTP)
