Non-interactive login to the IRIS terminal

Hey ISC Community!

For a small automation feature I would like to login to the IRIS shell non-interactively, skipping the whole username and password prompts, providing the credentials through other means. Something in the fashion of "iris session <instance-name> --user myuser --pass mypass" would be great, but the session tool itself doesn't seem to be capable of doing this.

Does anyone know a way to accomplish this? It need not be through "iris session", any way that can be automated would be fine. Disabling authentication for the terminal is not an option, though.
