Custom SAML Attributes

How do you determine what namespace to use for your custom SAML attributes? We want to receive patient context (first name, last name, dob, gender, etc.)

OASIS has resource-id but none of the other attributes. urn:oasis:names:tc:xacml:1.0:resource:resource-id

#Access control #Authentication #Security #SOAP #XML #HealthShare

Product version: HealthShare 2020.1
