SQL return Operation counts grouped by date?

I'm wanting to write a query in SQL that will return a row with a count for each day for a given month or year for a specific operation or configname. The following is a start but I'm not finding what I want in the documentation to parse out the TimeLogged field of the table. Nay help is appreciated.

SELECT count(TimeLogged), ConfigName
FROM EnsUtil.Log
where TimeLogged like '2021-07%'
and ConfigName = 'operationName'
group by TimeLogged
