## Specific error code for messages that are manually aborted by a user

New to Health Connect so please forgive me if this is a stupid question! Is there a specific error code returned when a user initiates an abort from the jobs tab of the business host? I want to be able to treat the Abort as Completed due to our complex business process. Currently, hitting abort just retries the message to the same business operation. What I want to do is provide the error code used by the Abort (if there is one) and treat it as OK

Thanks in advance.
