Global Access command query

Hello everyone,

I am new to cache. I want to know is there any direct command to know how to find maximum number of subscripts in global A through direct command.

I mean the answer is 9 but how to check it using a direct command on terminal.

Thanks in advance!!

`^A(1)="A"`

`^A(1,2)="B"`

`^A(2,1)="CVB"`

`^A(3,2,7)=""DFGH"`

`^A(4,1,8,9)="ASDASD"`

`^A(5,1,2,4,5,6,7,8,9)="ASDASDASD"`
