P2P OAUTH Recommended Flow

Hello,

I'm hoping to get some feedback on the OAuth process flow for Payer-to-Payer authorization. It doesn't seem that "Authorization Code Flow" is needed as there will not be a need for a login. I am leaning towards recommending "Client Credentials Flow", but wanted to get some community feedback before making a decision. I prefer to follow what the standard will be if possible. What would you recommend? Thank you in advance for your input.
