## how to restart connector/list of connector using another code (so by code) or terminal with a batch

Hello everyone,

I think I put everything in the title. It's a simple question : how to restart a connector or a list connector without double-clicking?

Is there a way using another connector to do so (using code)?

Is there a way using a command line in the terminator/ds command (in the purpose to use a batch)?

Faithfully,

Thomas
