&sql(sql query) not executing in Extended Business Componets Classes

Hi Community

I have extended my operation class from Ens.BusinessOperation class . I want to execute below sql on cache.

```
&sql(Select demoVersion into :DemoVersion from demointerface.DemoInstances where ID=:demoID)
```

this line not even giving error.

Please suggest me how to make sure my sql query should work everytime , when i call the class method

Same code is working fine in production but not working in local:(

Thanks a lot
