Zero configuration debugging

The latest release of [Serenji](#) by George James Software introduces zero configuration debugging, so it's ready to go in just one click - no matter where you are or what you're doing, your on-the-spot debugger is ready to go.

We have introduced a host of new features to enhance the debugging experience so you can focus on identifying and fixing errors, without losing focus by spending time setting up a launch configuration.

Check out the new features in our [release notes](#).

If you've already started using Serenji 3.2.0 let us know how you're getting on!
