%Stream.GlobalCharacter property in .NET API binding

Hi,

I'm trying to connect to IRIS with .NET 4.5 and I see is quite different from Cache Method.

I have a connection and I can invoke a Method but I can't get %Stream.GlobalCharacter value as Class property and I can't use it in a ByRef parameter. With Cache we had the Intersystems.Data.CacheTypes namespace to use this "special" types.

Is there any documentation to use the %Stream.GlobalCharacter as class property and ByRef Param?

Thanks!
