How to get Specific element from JSON file by Calling API from objectscript?

Hi

Following API:

<http://api.aladhan.com/v1/gToH?date=24-09-2021>

is returning following JSON response:

```
{
  "code": 200,
  "status": "OK",
  "data": {
    "hijri": {
      "date": "16-02-1443",
      "format": "DD-MM-YYYY",
      "day": "16",
      "weekday": {
        "en": "Al Juma'a",
        "ar": "\u0627\u0644\u062c\u0645\u0627\u0639\u0629",
        "month": {
          "number": 2,
          "en": "\u0627\u0644\u0647\u0627\u062c\u064a\u0631",
          "ar": "\u0627\u0644\u0647\u062c\u064a\u0631",
          "year": "1443",
          "designation": {
            "abbreviated": "AH",
            "expanded": "Anno Hegirae"
          },
          "holidays": [],
          "gregorian": {
            "date": "24-09-2021",
            "format": "DD-MM-YYYY",
            "day": "24",
            "weekday": {
              "en": "Friday",
              "month": {
                "number": 9,
                "en": "September",
                "year": "2021",
                "designation": {
                  "abbreviated": "AD",
                  "expanded": "Anno Domini"
                }
              }
            }
          }
        }
      }
    }
  }
}
```

How can I get "hijri":{"date":"16-02-1443"} portion from response JSON by calling above API by passing parameter date=24-09-2021 from objectscript?

Thanks
