## Modifying %Stream contents

I have a %Stream that I want to insert some text into the middle of. I create a new stream called pNewContentStream from the original stream, then I do a MoveTo in pNewContentStream to get to the byte position I want to insert into but when I do my Write, my pNewContentStream gets obliterated with only the text that I wrote, the original content goes away and all I'm left with is my Write text.

```
Method AddContentTypeCode4(pContentStream As
%Stream.GlobalCharacter, Output pNewContentStream As
%Stream.GlobalCharacter) As %Status
{
Set tStatus = $$$OK
try {
Set tTemp = pContentStream.Read()
$$$HSTRACE("AddContentTypeCode4[1]", "tTemp", tTemp)
Set pNewContentStream = ##class(%GlobalCharacterStream).%New()
$$$HSTRACE("New Stream")
Set tStatus = pNewContentStream.CopyFrom(pContentStream)
$$$HSTRACE("AddContentTypeCode4[2]", "tStatus", tStatus)
Do pNewContentStream.Rewind()
$$$HSTRACE("AddContentTypeCode4[3]",
"pContentStream, pNewContentStream", pContentStream, pNewContentStream)
Set tLocatorString = "<ns2:Description>"
Set tInsertPoint = pContentStream.FindAt(1, tLocatorString, .tStr, 0)
Set tInsertPoint = tInsertPoint + $LENGTH(tLocatorString)
$$$HSTRACE("AddContentTypeCode4[4]",
"tInsertPoint, pNewContentStream", tInsertPoint, pNewContentStream)
Set tStatus = pNewContentStream.Rewind()
Set tStatus = pNewContentStream.MoveTo(tInsertPoint)
$$$HSTRACE("AddContentTypeCode4[5]", "tStatus", tStatus)
Set tStatus = pNewContentStream.Write(..ContentTypeCodeInsertable)
$$$HSTRACE("AddContentTypeCode4[6]",
"tStatus, pContentStream, pNewContentStream", tStatus, pContentStream, pNewContentStream)
Do pContentStream.MoveTo(tInsertPoint)
Set tRemain = pContentStream.Read()
Do pNewContentStream.Write(tRemain)

$$$HSTRACE("AddContentTypeCode4[n]",
"pContentStream, pNewContentStream", pContentStream, pNewContentStream)
/// Set pNewContentStream.ContentType = tContentTypeCode
} catch ex {
Set tStatus = ex.AsStatus()
}
}
```

The trace labeled "AddContentTypeCode4[6]" shows tStatus = 1, pContentStream is intact and is as expected, pNewContentStream contains whatever was in ..ContentTypeCodeInsertable

What I was hoping to happen was at least having the beginning of pContentStream, then have the contents of
