Zen Reports

Is there a way to create anything like this?

```
4 XData ReportDefinition [ XMLNamespace = "http://www.intersystems.com/zen/report/definition" ]
5 {
6   <report xmlns="http://www.intersystems.com/zen/report/definition">
7     <group name="gTest1" OnCreateResultSet="CreateRS1">
8       <element name="name" field="name"/>
9     </group>
10    <group name="gTest2" OnCreateResultSet="CreateRS2">
11      <element name="name" field="name"/>
12    </group>
13  </report>
14 }
```

Multiples result sets.
