DTL Compile Error In Management Portal Not in Studio

I have a requirement which comes down to evaluating two fields, if they are both empty then provide a default value.

If one is empty but the other has a value, then set the empty one to the field with a value.

The screenshots are not the actual fields, I was just using the dtl and fields to prove out the solution.

```
1 if (..Length(source.MBRLASTNM)>1) && (..Length(source.MBRFIRSTNM)>1)
2   set target.Patient.Name.FamilyName "Not Provided"
3 else
4   if (..Length(source.MBRLASTNM)>1) && (..Length(source.MBRFIRSTNM)>1)
5     set source.MBRLASTNM source.MBRFIRSTNM
```

When I saved and compiled in the Management Portal I got an error, but it still compiled.

I then went to studio and opened the dtl, using view-->other code then compiled and did not get the error.

```
Compilation started on 10/01/2021 16:07:20 with qualifiers 'cuk /checkuptodate=expandedonly', using up to 2 worker jobs
Compiling class BKC.BKC.HS.dtl.BkcSourcedLabToSda
Compiling routine BKC.BKC.HS.dtl.BkcSourcedLabToSda.1
Compilation finished successfully in 0.368s.
```

Wondering if this is a true error or just an anomaly?

The code does at least through the testing tool, perform as desired.

Thanks,
