ObjectScript analog of Find with Match Element Type

Is there an ObjectScript analog of Find with Match Element Type option? I know there is an ObjectScript analog of Find in Files, `Studio.Project.FindInFiles` and `Studio.Project.FindInProject`, but I failed to locate so far an analog of Edit/Find. I am specifically interested in Match Element Type option so I could search across selected files for globals. Somehow `Studio.Project.FindInFiles` does not offer this option natively.
