Sending Mail with embedded image using %Net.SMTP

Hi,

I wonder if anyone tackled the following problem -

Sending a mail with an embedded image is straight forward using %Net.SMTP

S status=Message.AttachFile(Dir,FileName)

D Message.TextData.Write("..<img src=""cid:xyz.png"">..")

Outlook displays such an Email as expected - with the image in the body of the mail.

Gmail displays the image as an attached file.

There are a lot of suggestions online about this, but none is working for me.

Did anyone face and solved this issue?

Regards,

Nael Nasereldeen
