## Set up of SQL Query in the Management Portal in the IRIS Data Platform

Hi,

Is there way to set up an automated batch job in the Management Portal to execute an SQL query. Also, how can the related view be exported. I have executed the SQL queries and see the view and created files manually. I could not find any related documentation on the batch processes, but I thought batch or automated jobs could be set up via the Management Portal. Any information is appreciated...

Thanks
