## How could we activate a SOAP Operation only during a time slot

Hello community,

It would be appreciated if you could read and respond to us:

We need to activate a SOAP Operation during a time slot, in order to send messages to the target system, only for a few hours; for example from 4am to 8am.

The requirement is to do this without a scheduled task. This is because when changing nodes, in the production mirrors, there are difficulties, challenges, or issues with scheduled tasks.

Therefore, we need a mechanism that allows us to ensure that the Operation is executed even after a node change.

Please could you point us to documentation, code samples, example projects, repositories, or texts, where this is explained?

We have read:
