How to force stop a production

Hello, Complete novice here.

For some reason one of my productions can't be stopped, it only goes to the suspended state. This is an issue because now I'm not able to start any of my other productions. How can I force the suspended production to stop? I have tried `Do ##class(Ens.Director).StopProduction()` in the terminal, but I get an error the class doesn't exist.

How can I fix this issue?
