Iterate over an SQL result set

I running a query and get the results inside a result set. Now I have to iterate through the result set many times. From the doc I've seen only the Next() method. Is there a way to reset the cursor? Otherwise what is a good data structure to save multiple rows of a table?

My code in this case is something like this:

```
set sql = "SELECT * FROM MYTABLE WHERE X= 'Y'"
set status = ..Adapter.ExecuteQuery(.rs, sql)
// somehow iterate the rs more than one time
```
