## How to script the download of installation kits from the wrc

For all docker versions we have direct download links.

Like on our repository or on docker hub :

- <https://containers.intersystems.com>
- <https://hub.docker.com/search?q=intersystems&type=image>

However, there is no direct link to download the installable (non docker) versions.

I propose you these two scripts to solve this need, the first one is with the wget command, the other one in curl.

Wget :

```
wget --delete-after --keep-session-cookies --save-cookies cookies.txt \  
--post-data='UserName=<Your Login>&Password=<Your password>' \  
'https://login.intersystems.com/login/SSO.UI.Login.cls?referrer=https%253A//wrc.intersystems.com/wrc/login.csp'
```

```
wget --load-cookies cookies.txt --content-disposition \  
https://wrc.intersystems.com/wrc/WRC.StreamServer.cls?FILE=/wrc/Live/ServerKits/IRIS-2020.1.1.408.0-win_x64.exe
```

cUrl :

```
curl -L -c cookies.txt -d "UserName=<Your Login>&Password=<Your password>" https://login.intersystems.com/login/SSO.UI.Login.cls?referrer=https%253A//wrc.intersystems.com/wrc/login.csp
```

```
curl -b cookies.txt https://wrc.intersystems.com/wrc/WRC.StreamServer.cls\?FILE\=/wrc/Live/ServerKits/IRIS-2020.1.1.408.0-win_x64.exe --output IRIS-2020.1.1.408.0-win_x64.exe
```
