Export Zen Report or Query to a CSV file

Hi Guys,

How can I download or populate a query resultset or a content or DataGrid or zen report to a CSV file ?

basically, I know how to create a csv file than save it in a local path eg. C:/Temp/filename.csv but this is not convenient for the user to go then a try to find the file, I would like the CSV file to be downloaded or opened for the user to view the same way for example when you go a website where you have an option to download or open a csv file from query resultset or a zen report .

Thanks
