## Server Connections

I'm upgrading my laptop, and installed HealthShare 2020.2. I wanted to import my server connections from my previous laptop, so I exported the Registry Keys (Windows 10) Under Computer\HKEYCURRENTUSER\SOFTWARE\InterSystems\Cache\Servers from the old machine. I then imported them into new laptop, but I still don't get the list of connections in my HealthShare Remote System Access list from the HS Cube in my system tray.

Does anyone have a solution for this? I thought this was more portable.

[#HealthShare](#)

Product version: HealthShare 2020.2
