Exploring Native API for Node.js confusing documentation do not know where to create new directory

I am a newbie who is trying to learn how to set up a basic connection to Iris using a node js application. I am astounded at the lack of documentation there is on how to do this and even more concerning there are a few errors within the documentation. For example I am on the Native API application within the below link.

https://docs.intersystems.com/irislatest/csp/docbook/DocBook.UI.Page.cls...

And it says that you need to create a directory the thing is that it doesn't state which directory this needs to be or any other history. When you create the directory it says you can run the exercise and there are no instructions on how to do this.

Does anyone have any ODBC connectors /Iris documentation for node js that can be easily followed ? Or is this ODBC connector thing a beta or an experimental piece of software that is not used....

Kind Regards
