LOAD DATA with [SQLCODE: <-400>:<Fatal error occurred>]... any idea?

Hi all,
I try to build a little project for the [dataset contest](#), you can find it here on github: [Openflights dataset](#)
My plan is to use just plain SQL. So I've made a few experiments with the new feature **LOAD DATA**.

Unfortunately all loads produce errors like:
 Error: [SQLCODE: <-400>:<Fatal error occurred>]
[Error: <<UNDEFINED>zExecute+83^%sqlcq.OPENFLIGHTS.cls4.1 *%qparsets>]
[Location: <ServerLoop>]

The statements I use looks like this:

```
38
39  --https://docs.intersystems.com/iris20212/csp/docbook/DocBook.UI.Page.cls?KEY=RSQL_loaddata
40  LOAD DATA FROM FILE '/usr/airlines.dat'
41  COLUMNS
42  (
43    uid       int,
44    name      varchar(255),
45    alias     varchar(255),
46    iata      varchar(2),
47    icao      varchar(3),
48    callsign  varchar(255),
49    country   varchar(255),
50    active    char(1)
51  )
52  INTO flights.airlines
53  (
54    uid,
55    name,
56    alias,
57    iata,
58    icao,
59    callsign,
60    country,
61    active
62  )
63  VALUES
64  (
65    uid,
66    name,
67    alias,
68    iata,
69    icao,
70    callsign,
71    country,
72    active
73  )
74  USING {"from": {"file": {"header":"0","columnseparator":","} }}
75  GO
```

This happend with the preview release "IRIS Version 2021.2.0.617". While this error occurs, most rows are written to the database, but some rows are missing. This happend with all 9 datafiles in my project... all statements I've used are here.

I'm connected to IRIS via JDBC

Any ideas? Thanks in advance!

Andreas
