Convert X12 to SDA/FHIR

Hi

We are embarking on a project that we are injecting raw EDI files 837's to start with into HS.

We have an inbound X12 adaptor to take in the raw *.edi file and we have a business process that is mostly pass thru. We have been unable to find any DTL to map X12 to SDA/FHIR (similar to the ones that exist for HL7 , CDA, CCD). If anybody has done anything on this front, would appreciate any tips.

Santosh
