How to delete EnsEDI Globals?

When I installed the IRIS 2021.2 Community Edition, I found some Globals, which seem to be set for the InterSystems Ensemble and DeepSee products. For me that is an annoying design error in those products and only confusing my developers.

As I do not want to use these, I tried to delete them, because they interfere in the list of globals mixed with our own Globals.

But for several of the EnsEdi Globals I get an error message telling me, they can't be deleted, because they are wrong.

Is there a way to get rid of them? Or do I have to wait for a new IRIS version?
