# How to Concatenate Strings to create large string which contains"" inside in object script

Hi Developers,

I need to construct a string as xml which consists of "" in it. As example below

set teststr ="<book id="bk105"><author type="old">Corets, Eva</author><title>The Sundered Grail</title><genre>Fantasy</genre></book>"

giving error in the area where " in middle of the string (highlighted in bold)

Could anybody suggest to me, how to construct a static string in object scripts with " in it?
