\$ZF(-100) Troubles

Hello guys! I need some assistance with these problems I have.

The first one is that I need to execute a Python file, which is at /XY path. This PY is supposed to read an excel file and create a CSV version in /XZ path.

I am quite sure that the PY file is correct, but when using this function I get nothing but this error:

```
SET tSC = $ZF(-100,"/ASYNC /SHELL  
", "python", "/data/InterSystems/IRIS/mgr/TEST01CODE/ExcelReading/ExcelToCSV.py")
```

ConfigItem 'FJ EXCEL READING' (FJ.BS.ExcelReading) started in job 3164

ERROR #00: (sin descripción de error)

Any ideas or suggestions?

The second error I have is very similar, but this time I need to Unzip a file in /XY path and leave the result in /XZ path using GNU/Linux commands. I have tried some varieties of this code:

```
SET tSC = $ZF(-100,"/ASYNC /SHELL ", "unzip '*.zip'", "/data/InterSystems/IRIS/mgr/TEST01CODE/ZipFiles")
```

From this I get the same error result from first case. Both are just Business Services with nothing but a Try Catch and Ens.InboundAdapter.

The folders are already created in their respective paths.

Thank you for your time and help!
