not able to see whole log message in message viewer in Management Portal

Hi Community

I have logged final generated json in the object script class using below statement

```
$$$LOGINFO("JSON = " _newMsg.Read())
```

where newMsg contains JSON stream, which contains nearly 1000000 + bytes.

In message viewer I am able to see Only some part of the json .

I want to capture all the json for my validation, how can i see total JSON in Management portal or any other source?

Thanks in Advance
