How to use Cache JDBC in a Gradle project (Java)?

I am using a Gradle Project for testing APIs, but I need to connect to the database.

I already put this on the dependencies:

```
implementation 'com.intersystems:intersystems-jdbc:3.0.0'
```

And I'm trying to use this way:

```
public Connection conectaBD(){  
  
    String url="xxxxx";  
    String user="xxxxx";  
    String password="xxxxx";  
    String bddriver = "com.intersys.jdbc.CacheDriver";
```

But I'm keep getting this error: java.lang.ClassNotFoundException: com.intersys.jdbc.CacheDriver

Is there any place that I can put a JAR file? Because the project has no lib folder (I already tried to add it, but it doesn't work).
