Saving a serial object using Result set

Hi Folks,

I created a **persistent** class as below

```
Class myclass.DataBase Extends %Persistent
{

Property ID As %String;

Property Skill As list Of myclass.SerialTablelist;
}
```

and Created another Serial class as

```
Class myclass.SerialTablelist Extends %SerialObject
{

Property PSkill As %String;

Property OSkill As %String;
}
```

Now I will save the id as below

```
do rs.Prepare("Insert into myclass.DataBase(ID)VALUES(?)")
do rs.Execute(ID)
```

I am facing issue with the **AS LIST OF**

Could any one guide me how to save the Skill (PSkill ,OSkill) using **resultset** (I am able to)
