ALTER TABLE ALTER COLUMN RENAME Syntax

Hi everyone, i cant understand what is wrong in my query:

```
ALTER TABLE MyNamespace.MyTable ALTER COLUMN CurrentColumnName RENAME NewColumnName
```

I just want to rename column name using sql.

I could not find any life example using this syntax.

SQLCODE for this query is -25:

-25 Input encountered after end of query

Quote from documentation:

- Rename the column using the syntax ALTER TABLE tablename ALTER COLUMN oldname RENAME newname. Renaming a column changes the SQL field name. It does not change the corresponding persistent class property name. ALTER COLUMN oldname RENAME newname replaces oldfield name references in trigger code and ComputeCode.'
