What is the difference between "MAXSTRING" and "STRINGSTACK" error?

Hello,

We have recently received the two following errors as part of a PDF extraction process and I am trying to figure what the difference is between the two errors?

1. ERROR <Ens>ErrorException: <MAXSTRING>zGetReferralDocFromStream+30^UCLH.SIP.Operation.PBT.HTTP.V1.RefDocRequest.1 -- logged as '-' number - '@' set file=object.%Get(i).file'
2. ERROR <Ens>ErrorException: <STRINGSTACK>zGetReferralDocFromStream+30^UCLH.SIP.Operation.PBT.HTTP.V1.RefDocRequest.1 -- logged as '-' number - '@' set file=object.%Get(i).file'

Can someone please explain what the difference is?

Thanks!
