Monitoring Status of IRIS Production

Hello All,

I am looking for some ideas from people who have automated alerting in place for their Ensemble or IRIS productions.

I want to start with basic things like, simply checking if a Production is up and running. Once this has been achieved, I am looking to go deeper and implement monitoring on each interface level for things like, Queue Size, Errors and Inactivity.

Would appreciate if you can share some ideas. I have been exploring <http://localhost:52773/api/monitor/metrics> but don't see anything in there that tells me whether my Production(s) are running ok or not.

Thank you.

Regards,

Utsavi
