How to access target properties from SQL action in DTL Subtransform

Does any one could tell me how can I access the target properties from inside SQL in DTL Subtransform? For example, if I use the following statement:

SELECT ID INTO :target.SetIDPID FROM firstlook.person WHERE FirstName = 'Paul' - as said in documentation :

```
SELECT Name INTO :target.Name FROM MainFrame.EmployeeRecord WHERE SSN = :source.SSN  
AND City = :source.Home.City
```

I get an Error: ERROR <Ens>ErrException: <PROPERTY DOES NOT EXIST>

But if I pass the value for a variable "SetIDPID" I can use it in a set action without any problem:

SELECT ID INTO :SetIDPID FROM firstlook.person WHERE FirstName = 'Paul'
