How to import exported classes from studio into vscode?

Hi Community,

We are not using github or any source safe till now. We have ensemble hl7 interfaces (business services, processes, operations) available in production. Now we want to deploy these interfaces to a brand new cloud server with iris instance.

Here in current production we have studio access but new cloud server iris we have only vscode access.

I have exported all the classes from current production using Studio and I have exported xml file with me.

How to import this exported file into VS CODE to deploy classes in a new cloud server?

Does VS CODE have any option to import cls files form exported xml file??

Could you please help me, it is very urgent to do it.
