## How to show Generated classes in Visual Studio Code

I want to be able to view generated items from visual studio code. In Studio there was an option in the open dialog:

Specifically, I added a namespace to my workspace for editing (Using InterSystems Server Manager) and I want to be able to access the generated items in this namespace.

I tried modifying the following setting:

```
"objectscript.export":{  
  "generated":true  
}
```

But this did not seem to make an impact. Is there some sort of refresh I need to do to make this setting do what I want, or is there a different way to do it?
