Visual Studio Code Development

Please, I am having trouble connecting to one of several Health Share servers using ISC's Visual Studio Code add-on.

Installation seemed to go smoothly. I have InterSystems's Studio and was able to automatically pull in my existing connections. However when I try to make a connection it fails.

Here is a configuration of one connection slightly edited for security:

```
"xxxx-hsiecommon-base": {

"description": "This has been created by the CCR system export.",

"username": "therock",

"webServer": {

"host": "mongo.il.intersystems.com",

"port": 57772,

"scheme": "http"

}

}
```

Any ideas? Appeciate!
